### SLAB LFE & NHF VERIFICATION

The flood insurance application and Elevation Certificate (EC) for the property listed above indicate the building was constructed slab on grade. However, there is less than an eight foot difference between the top of the slab elevation and the next higher floor elevation. Due to the less than eight foot difference, the policy will be issued using the rates for the lowest elevation provided on the EC. If this is incorrect, please complete this worksheet, sign, and return it to us.

If the building is constructed slab on grade, document the difference by choosing one of the following:

\_\_\_ Lowest floor elevation is a recessed shower elevation and the next higher floor elevation is the living floor slab elevation.

\_\_\_ Lowest floor elevation is a sunken room elevation and the next higher floor elevation is the living floor slab elevation.

\_\_\_ Other: \_\_\_\_\_

If the foundation has been incorrectly identified and the building is elevated on a crawlspace, please complete the following information.

Crawlspace size (square feet): \_\_\_\_\_

Number of vents within one foot from ground: \_\_\_\_\_

Size of vents (height X width or total square inches): \_\_\_\_\_

Are there vents on more than one side of the building? \_\_\_ Yes \_\_\_ No

Agent Signature: \_\_\_\_\_ Date: \_\_\_\_\_
